## INTELLIGENT DIGITAL INDICATORS DM3400 SERIES

### INTRODUCTION

The DM3400 is a series of highly accurate and stable digital indicators. The DM3410 and DM3411 are for Temperature indication, and the DM3420 and DM3421 for Process.

Designed without compromise, the DM3400 series uses leading edge technology to accept all commonly used temperature or process inputs. Engineering units are displayed on a high efficiency Red (Green option) LED display that provides daylight readability. The indicators can easily be used 'stand alone' or, using the Modbus serial communications option pod, as part of a larger system.

The display can be set to show a fixed number of decimal places and to auto scale to show the maximum resolution.

The highly innovative case design enables option 'Pods' to be easily installed without the need for dismantling or re-calibration. A range of 'Plug and Play' Pods are available covering:-

- Relay outputs
- Isolated 4-20 mA re-transmission
- Modbus RS485 serial comms.

The flexibility of plug-in option pods combined with the switch mode power supply results in reduced stock holdings and, in common with the other products from Status Instruments, a low 'cost of Ownership'.

The front panel is sealed to IP65 and the case has a moulded in rubber gasket enabling it to seal to the panel maintaining the IP65 rating, ideal for installing it in 'dusty' areas or where low pressure jets of water are used to clean down equipment.

Tension clamp\*1 two part connectors are provided for 'fast wiring' enabling installation to be completed in typically half the

time it would take using conventional screw terminals. These high quality connections are manufactured to IEC-947-1 and IEC947-7 standards and maintain the contact permanently under tension to also provide superior long-term performance in the presence of vibration.

\*1 alternative clamping yoke screw terminal connectors are available to special order.

### SET UP

Programming is via the front panel keys following a logical menu structure which can be set to 'Short' (default), whereby only the common usage features are presented to the operator, or 'Full' where the full range of programmable features is available. Alternatively via a PC by using the RS485 (Pod-3000-05) Modbus communication pod.

### MENU MODE

Two front panel programming menus can be selected as follows with the option of password protection.

**Connection Method****Tension Clamp\*2 Two Part**

The tension clamp pulls the conductor firmly against the copper current bar which is coated with a tin lead compound

- zero-maintenance connection
- gas-tight clamping point
- constant contact force
- wire size 0.5 to 1.5 mm<sup>2</sup>

**DM3420 PROCESS INDICATOR**

The DM3420 accepts all common process signals, current or voltage, and displays the signal digitally in engineering units. An internal power supply provides excitation for field transmitters.

**PROCESS**
